Professional Profile

Engineering student in **Cybersecurity and Networks**, focused on **application security** and **web pentesting**. My current work is mainly centered on the analysis and controlled exploitation of **OWASP Top 10** vulnerabilities through hands-on labs, CTF environments, and personal technical projects. I build on a solid foundation in full-stack development, Linux administration, and modern web architecture.

Professional Experience

Full Stack Developer – MicroTrack Project (Internship), HPS – Casablanca 2024 – 2025

- Designed and developed **MicroTrack**, a microcredit platform centralizing case management, metrics tracking, and financial process automation.
- Contributed to the design of a modular, scalable architecture, including a scoring engine and real-time alerts in a business-critical environment.
- Strengthened my backend design, web application structuring, and reliable software engineering skills for critical systems.

Java / Web Developer (Internships & Freelance), Ilem Group – Casablanca 2024

- Built web and backend applications using **Spring Boot**, **Angular**, **MySQL**, and frontend technologies.
- Contributed to multiple projects including IT asset management, an internal ERP, institutional web interfaces, and multilingual content integration.
- Worked on features related to **REST APIs**, authentication, **Active Directory** integration, and **Docker**-based deployment.

Academic and Personal Projects

VulnLabX – Local Web Pentesting Training Lab 2025

- Built a local web security training platform using **Next.js**, **Express**, **PostgreSQL**, **Prisma**, and **Docker**.
- Simulated realistic **OWASP Top 10** vulnerabilities with progressive challenges, difficulty levels, per-user flags, hints, and example solutions.
- Implemented a **secure-by-design** flag system based on **HMAC**, generated per user and per difficulty level.
- Added challenge variants with progressive **WAF-style** filters, allowing safe local practice of vulnerabilities such as **XSS**, **SQLi**, **IDOR**, and **SSRF**.

Virtual Defensive Cybersecurity Lab from Scratch Ongoing

- Designing and building a virtual lab dedicated to hands-on **defensive cybersecurity** training.
- Progressively creating a technical environment integrating Linux machines, network segmentation, system administration, monitoring, and basic detection mechanisms.
- Personal project focused on traffic analysis, system hardening, and operational defensive security practices.

Technical Skills

- **Web Pentesting / AppSec**: OWASP Top 10, application security testing, HTTP request/response analysis, identification of web vulnerabilities.
- **Vulnerabilities Studied**: **XSS**, **SQL Injection**, **IDOR**, **SSRF**, authentication weaknesses, access control flaws, security misconfigurations.
- **Security Tools**: **Burp Suite**, browser DevTools, network diagnostic tools, CTF environments.
- **Systems & Administration**: **Linux**, Linux administration, Bash scripting, user management, permissions, processes, services, file systems.
- **Development & Backend**: Java (**Spring Boot**), JavaScript (**Node.js**, **Express**, **Next.js**), PHP (**Laravel**), **Angular**, **React**.
- **Databases & Infrastructure**: **PostgreSQL**, **MySQL**, **MongoDB**, **Prisma**, **Docker**, **Git**.

Education

Moroccan School of Engineering Sciences (EMSI), Casablanca 2024 – Present

Engineering Student – CIR track (Cybersecurity, Information Systems and Networks)

Specialized Institute of Management and Computer Science (ISGI), Casablanca 2022 – 2024

Specialized Technician Diploma in Full Stack Web Development

Leadership & Volunteering

Organizer , Google Developer Groups (GDG) Casablanca	02/2026 – Present
Contribute to the operational organization of events, coordination between speakers and team members, community communication, and the chapter’s relaunch efforts.	
Lead , Google Developer Groups (GDG) On Campus EMSI	09/2025 – Present
Led the club strategically, supervised technical divisions (Cybersecurity, Web, AI), and organized technical events for the student community.	
Web Dev Lead & Design Lead , Google Developer Groups (GDG) On Campus EMSI	11/2024 – 06/2025
Led technical workshops, mentored junior members, and managed the chapter’s visual and digital identity.	
Volunteer , Al Haouz Earthquake Relief	08/2023 – 09/2023
Coordinated on-site logistics for emergency aid distribution.	

Cybersecurity Competitions & Activities

CTF Player – Web Security Focus	Present
- Regularly participate in cybersecurity challenges on Hack The Box, PicoCTF, and other competitions listed on CTFTime. - Practice is focused on web security, controlled exploitation of application vulnerabilities, and solving challenges inspired by the OWASP Top 10.	
Participant – MACC 2026	Ongoing
- Ongoing participation in the Moroccan Autonomous Cybersecurity Challenge (MACC) 2026, a national cybersecurity competition. - Strengthening skills in challenge solving, vulnerability analysis, and CTF competition methodology.	

Awards

2nd Prize – Regional Entrepreneurship Forum	05/2024
Awarded for the innovation and technical viability of an entrepreneurial project in the Casablanca-Settat region.	
4th Place – Regional Digital Week Hackathon	05/2024
Strong performance in an intensive 48-hour hackathon against 34 competing teams.
